

ALU PULL KIT AK 98

Dent-pulling technology for Aluminium-panels

Many aluminium parts of car body can now be saved by using the AK 98. The innovative stud-welding technology combined with an automatic pistol is now revolutionising the dent-repairing of aluminium panels.

The AK 98 can be used for the repair of aluminium panels which have:

- Minor dings and dents
- Longitudinal scratches
- Hail damages

Technology and innovation for the up-to-date car body repair:

The AK 98 is a completely micro-processor controlled unit. The precise digital display showing the charging voltage allows for the exact adjustment of all parameters

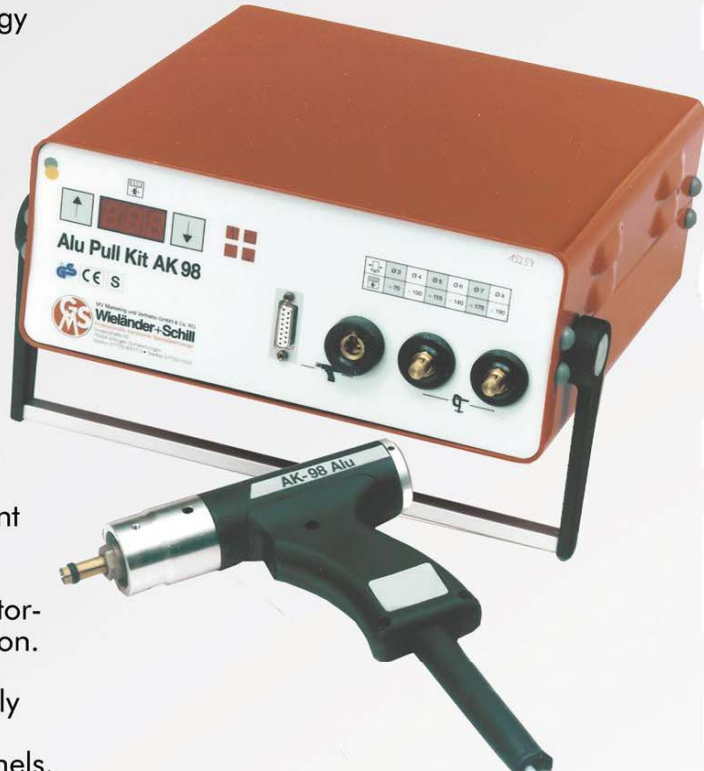

When using stud welding with capacitor-discharge technology and peak-ignition. This means cool stud welding with no distortion. The aluminium panel is fully protected from heat. There will be no burnt patches on the inside of the panels.

All bodywork repairs using the AK 98 can be done from the outside. Therefore, no more pushing from the inside and no more removing of the inside trimming or air bags.

Dent removing with the AK 98 is very simple to master. The pistol AK 98 ALU is ergonomically shaped and easy to hold. This new technology saves time and helps to reduce repair costs.

The dent-removal kit AK 98 can be used on the aluminium panels of:

- Modern cars
- Body repair of trucks
- Bus-panelling
- Caravans
- Container-building
- Campers

Delivery contents:

- control unit AK 98
- pistol AK 98
- earth cable 2 pcs.
- stud holder M4
- studs \varnothing 4mm 100 pcs.
- washer 3 pcs.
- pulling rod 3 pcs.
- case with interfacing
- GS/CE/S sign
- Made in Germany
- Art.-No. 361000

Accessories:

- Maxilift Art.-No.351060
- Washer Art.-No.368040
- Pulling rod Art.-No.368050
- Stainless steel brush Art.-No.541211
- Bolt puller univ. Art.-No. 368060
